REACT front-end for REST API (40 p.)

The topic of the last project in the course is building a front-end in the project you created in project 2.

Requirements:

- The site must use REACT
- Site should present some data when it is loaded
- It must be possible to search the page for user-written help using a form / drop-down menu, etc.
- The page should take advantage of all information retrieval paths provided by the API
- Stylize the page using the style libraries you want, such as Bootstrap, etc.
- Describe the operation of the app in the Readme.MD file
- Publishing in Azure or similar

.
